

WEBER RESCUE SYSTEMS shows a fireworks of innovations at Interschutz 2022

After six intensive days at the trade fair, the innovative rescue equipment manufacturer draws an extremely positive balance. Never before in the company's history have so many innovations be presented at the same time. With the new SMART-FORCE rescue tools, the SMOOTH CUT technology and numerous digital tools, a quantum leap in rescue tool technology was achieved, which was enthusiastically received by the visitors.

"The feedback we received from users directly during the trade fair was simply overwhelming," Bernhard Obermayr and Hanno Diekmann, Head and Deputy Head of the Rescue Business Unit at WEBER-HYDRAULIK GMBH, say in unity.

"Of course, the SMART-FORCE devices were the highlight at the stand. In addition to the many new possibilities offered by digitalisation in rescue, the world's first F7 cutter and the new generation of cutters were particularly popular."

Here is a brief overview of what was shown at the stand:

- **The new SMART-FORCE tool series:**

The Milwaukee M18™ high-output battery makes the tools even faster and more powerful. Numerous smart features such as pressure display and a training and theft mode are available in the dedicated app. The robust housing of the SMART-FORCE rescue tools ensures underwater capability and ingress protection from dust and small particles.

- **New cutting technology SMOOTH CUT and the world's first F7 cutter**

Quiet, low-stress and safe cutting with low weight. With the new technology, the strongest standard material "F7" according to the American NFPA 1936 standard can be cut through for the first time worldwide. Optimum cutting performance has been achieved with the High-strength, forged lightweight blades with optimised blade geometry for maximum safety with low weight, making this a very powerful tool.

- **Handvario RIT-Tool – Flexible applications, even under water**

B-COMPACT ECO XL – Power unit with an XL-size hydraulic oil tank

Digital solutions:

RETTERRSeismo – Seismographic measurement via app

E-learning for aid organisations: RETTERAcademy and WEBER RESCUE Academy

RETTERRAlarm - The individual alerting system for relief organisations

RETTERRAlarm Zeus - The central operation support system

About WEBER RESCUE SYSTEMS

For more than 40 years, WEBER RESCUE SYSTEMS has proven itself as a specialist for rescue equipment, by developing innovative and powerful rescue tools. „The right tool for the right situation“, this is the basis for our aim to offer a one-stop shop for rescue systems. The latest generation of hose cutters, spreaders and combi tools can easily be converted to E-FORCE3 battery powered devices via a new connection point. Due to the newly developed switch valve, our tools always work in the maximum speed range and the optimum gear. In addition, we offer a wide range of useful additional products for rescue organisations on our website.
